

# We are looking for a Lab Technician at Toxys

## About Toxys

Toxys is a Dutch biotech company that develops and provides innovative in vitro solutions for safety testing of novel pharmaceutical compounds, chemicals and materials. Our stem cell-based reporter systems are designed to rapidly identify hazardous and potential carcinogenic properties of novel compounds during the early phases of product and drug development. Toxys exclusively offers ToxTracker, a unique reporter assay for carcinogenicity hazard identification with unsurpassed sensitivity and specificity that has the important advantage that it provides insight into the underlying mechanisms of toxicity.

We are currently expanding our portfolio with a novel stem cell-based reporter system for developmental toxicity. Our unique ReproTracker assay combines the expertise at Toxys on stem cells, genome editing and mechanistic toxicity screening and is aimed to rapidly identify compounds that disturb stem cell differentiation and early embryonic development.

We always aim to closely collaborate with our customers to provide them with the necessary information to make decisions on which compounds to progress in the drug development pipeline, thereby contributing to the development of better medicines and products. In addition, by developing advanced in vitro test systems, Toxys contributes to the reduction of animal testing. To support our ambitions in these fields, we are expanding our team.

## Job Description

We are looking for a technician that will perform contract research using our ToxTracker assay and contributes to the development of ReproTracker. You have experience with cell culture (preferably stem cells), stem cell technology, DNA cloning and genome editing, flow cytometry and reporting. As you work in customer projects we expect you to be accurate and results orientated. You are able to design, plan and execute experiments in cooperation with the (Sr) Scientist. You will take care of laboratory organisation and related administrative tasks.

Job Location: Leiden, The Netherlands

Position Type: 0.8-1 FTE

Respond before: 31 October 2018

## Your letter of motivation and CV should show that you have:

- BSc or MSc degree in life sciences, biochemistry, biochemical engineering or related field
- Minimal two years of professional experience (industry is a plus)
- Hands-on experience in the following fields
  - Standard molecular biology and cell culture methods
  - FACS analysis
  - PCR
  - GLP experience is a plus
- Excellent writing and communication skills
- Good command of the English language (written and spoken)
- Pro-active attitude and hands-on mentality

## Toxys Offers

We offer an innovative working environment in an ambitious start-up company. Selected candidate will be offered a competitive salary and the opportunity to play an important role in a growing company. If you are enthusiastic please send your application to: [jobs@toxys.com](mailto:jobs@toxys.com)

If you want to impress us send a short video to introduce yourself and explain what you can contribute to the growth of Toxys.
